Introduction

Dance Studio is a dance game step chart creation tool for Windows and Mac that allows you to easily create step charts and song packs that are playable on Stepmania for PC or an In the Groove arcade machine. It simplifies creation of step charts by providing functionality for things like:

- Showing audio visualization inline with the step chart for easy placement of steps.
- Automatic beats per minute (BPM) detection when importing audio files which helps with synchronizing arrows to the beat.
- Stepchart generation functions for automatically creating fun charts.
- Prebuilt step pattern templates for easy insertion into an existing chart.
- Real time recording of steps while the music plays using the keyboard.
- Quantization of steps to ensure steps are aligned to the beat.
- Creation of song packs for easy organization when creating multiple step charts.

Logging

Dance Studio will automatically log your user operations to a log folder. You can inspect these logs to help troubleshoot when there is a problem with Dance Studio, or if you need to send in a bug report.

Windows

The log folder is located at C:\Users\<logged in user>\AppData\Local\DanceStudio\logs.
